

10 Find the measure of  $\angle XVS$ .

$$4x + 2x = 180$$

$$6x = 180$$

$$x = \underline{\underline{30}}$$

$$2(30) = 60^\circ$$

$$m\angle XVS = 60^\circ$$

11 One of two supplementary angles is  $70^\circ$  greater than the second. Find the measure of the larger angle.

$$x = \text{ANGLE}$$

$$180 - x = x + 70$$

$$\text{SUPP} = 180 - 55$$

$$180 - x = \text{SUPP}$$

$$-2x = -110$$

$$\text{SUPP} = \underline{\underline{125}}$$

$$x = \underline{\underline{55}}$$

$$\text{LARGER} = 125^\circ$$

- 12 a Point P is reflected over the y-axis to point A. Find the coordinates of A.  
 b Point P is reflected over the origin to point B. Find the coordinates of B.  
 c If C is the midpoint of  $\overline{PA}$ , find the coordinates of C.

13 Complete each of the following conditional statements and justify your completion with an explanation.

a If two angles are supplementary and congruent, then ?

THEY ARE BOTH RT. ANGLES  $90^\circ$

b If two angles are complementary and congruent, then ?

THEY ARE BOTH  $45^\circ$ .

16 Two supplementary angles are in the ratio 11:7. Find the measure of each.

$$11x + 7x = 180$$

$$18x = 180$$

$$x = \underline{\underline{10}}$$

$$11(10) = 110^\circ$$

$$7(10) = 70^\circ$$

$$11:7$$

$$110:70$$

19 One of two complementary angles added to one-half the other yields  $72^\circ$ . Find half the measure of the larger.

$$\text{ANGLE} = x$$

$$90 - x + \frac{1}{2}x = 72$$

$$\text{COMP} = 90 - 36$$

$$\frac{1}{2}(54) = 27^\circ$$

$$\text{COMP} = 90 - x$$

$$-\frac{1}{2}x = -18$$

$$\text{COMP} = \underline{\underline{54}}$$

LARGER

$$x = \underline{\underline{36}}$$

21 The supplement of an angle is four times the complement of the angle. Find the measure of the complement.

ANGLE =  $x$   
 COMP =  $90 - x$   
 SUPP =  $180 - x$

$$180 - x = 4(90 - x)$$

$$180 - x = 360 - 4x$$

$$3x = 180$$

$$\underline{\underline{x = 60}}$$

ANGLE = 60

COMP =  $90 - 60 = 30^\circ$

SUPP =  $180 - 60 = 120$

7 Given:  $\overleftrightarrow{CD} \perp \overleftrightarrow{DE}$

Prove:  $\angle CDF$  is comp. to  $\angle FDE$ . (Hint: This proof takes more than two steps.)

Statements

Reasons

- 1)  $\overleftrightarrow{CD} \perp \overleftrightarrow{DE}$
- 2)  $\angle CDE$  RT. ANGLE
- 3)  $\angle CDF$  COMP  $\angle FDE$

- 1) GIVEN
- 2) IF 2 LINES ARE PERP, THEN THEY FORM RT. ANGLES
- 3) IF 2 ANGLES FORM A RT ANGLE, THEN THEY ARE COMP.

8 Given: Diagram as shown

Prove:  $\angle GHK$  is supp. to  $\angle KHJ$ .

Statements

Reasons

- 1)  $\angle GHK$  SUPP.  $\angle KHJ$

- 1) IF 2 ANGLES FORM A STRAIGHT ANGLE, THEN THEY ARE SUPP.

NOTE: NO NEED TO SAY  $\angle GJH$  STRAIGHT ANGLE
