

1B - Warmups

$$\lim_{a \rightarrow \infty} \frac{6a+3}{a^2-7} = \frac{\cancel{6a} + \cancel{3}}{\cancel{a^2} - 7} = \frac{0}{1} = 0$$

$$\lim_{n \rightarrow \infty} \frac{1}{n^2} = 0 \quad \text{Bottom Heavy}$$

$$\lim_{n \rightarrow \infty} \frac{n^2}{\sqrt{n^4+1}} = \frac{1 \left(\frac{1}{n}\right)}{\sqrt{1+\frac{1}{n^4}}} = \frac{1}{\sqrt{1+\frac{1}{n^4}}} = \frac{1}{1} = 1$$

1B - Squeeze Theorem

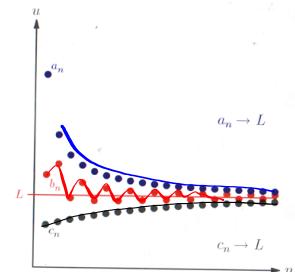

If we have sequences a_n , b_n , and c_n such that:

$$(a_n \leq b_n \leq c_n) \text{ for all } n \in \mathbb{Z}^+$$

and

$$\lim_{n \rightarrow \infty} a_n = \lim_{n \rightarrow \infty} c_n = L < \infty$$

$$\text{Then } \lim_{n \rightarrow \infty} b_n = L$$

1B - Squeeze Theorem - Examples

$$1.) \lim_{n \rightarrow \infty} \frac{\sin n}{n} \quad -1 \leq \sin n \leq 1 \\ -\frac{1}{n} \leq \frac{\sin n}{n} \leq \frac{1}{n}$$

$$\left(\lim_{n \rightarrow \infty} -\frac{1}{n} = 0 \right) \quad ; \quad \left(\lim_{n \rightarrow \infty} \frac{\sin n}{n} = 0 \right)$$

BY SQ. THM.

1B - Squeeze Theorem - Examples

$$2.) \lim_{n \rightarrow \infty} \frac{2 - \cos n}{n+3} \quad -1 \leq \cos n \leq 1 \quad (\text{by -1}) \\ -1 \leq -\cos n \leq 1$$

$$1 \leq 2 - \cos n \leq 3 \\ \frac{1}{n+3} \leq \frac{2 - \cos n}{n+3} \leq \frac{3}{n+3} \\ \lim_{n \rightarrow \infty} \frac{1}{n+3} = \lim_{n \rightarrow \infty} \frac{3}{n+3} = 0 \quad (\text{Bottom Heavy})$$

$$\therefore \boxed{\lim_{n \rightarrow \infty} \frac{2 - \cos n}{n+3} = 0}$$

1B - Squeeze Theorem - Examples

3.) $\lim_{n \rightarrow \infty} \frac{n!}{n^n}$

$\frac{n!}{n^n}$ is always $\geq c$

$$0 \leq \frac{n!}{n^n} \leq ?$$

$$0 \leq \frac{n!}{n^n} \leq \frac{1}{n}$$

$\lim_{n \rightarrow \infty} \frac{1}{n} = 0$

$\therefore \lim_{n \rightarrow \infty} \frac{n!}{n^n} = 0$

1B - Squeeze Theorem - Examples

4.) Problem #2 from 1B homework

a.) Show that $\frac{6^n}{n!} \leq \frac{6^5}{5!} \times \frac{6}{n}$ for $n \geq 6$.

$\frac{6 \cdot 6 \cdot 6 \cdot \dots \cdot 6}{(n \cdot (n-1) \cdot (n-2) \cdot (n-3) \cdot \dots \cdot 5 \cdot 4 \cdot 3 \cdot 2 \cdot 1)} \leq \frac{6 \cdot 6 \cdot 6 \cdot 6 \cdot 6}{5 \cdot 4 \cdot 3 \cdot 2 \cdot 1} \cdot \frac{6}{n}$

$\frac{6 \cdot 6 \cdot 6 \cdot \dots \cdot 6}{(n \cdot (n-1) \cdot (n-2) \cdot (n-3) \cdot \dots \cdot 7 \cdot 6)} \leq 1$

NUM \leq DENOM for all values of n.

$\therefore \frac{6^n}{n!} \leq \frac{6^5}{5!} \cdot \frac{6}{n} \quad n \geq 6$
